

Colposcope Question

SART Listserv

May 2007

Background: We are looking to buy a colposcope for our SANE program (which serves victims, age 12+) and was wondering what most programs are using - below are specific questions I had...

- What are you using the colposcope for, and in what format?
- Did you need to coordinate the computer system at the hospital you are using it at and did this dramatically change the cost?
- What were the maintenance and storage upkeep costs?
- Does the company offer training and how much of it builds into the costs?

New York (New York City)

- More and more programs in New York City are beginning to use the Allpro Medscope. <http://www.allproimaging.com/Medical/MedScope/default.aspx>
- It's much less expensive than a high-end colposcope, and it is less awkward to use for clinicians not already familiar with colposcopy.
