

Tracking Systems

SART Listserv
February 2007

Issue: Tracking system for law enforcement

Background: As part of a SART grant, there is funding to purchase a tracking system for law enforcement. This system would gather data on crimes such as similarities in type of assault, description of suspects, locations, etc. It would be a data base on known perpetrators, drawing upon any other intelligence available. Does anyone know of any tracking systems besides the TACT system? That seems to be the most widely known.

R/Client Software for Victim Services

http://www.greatlakesresearch.com/tech/rclient_victim_services.htm

Technology Solutions for the Victim Service and Criminal Justice Community. R/Client Victim Software was designed by Great Lakes staff and a consortium of victim-serving agencies to address the specific needs of victim-serving agencies. It can be customized for your program/location and has a report writer that can pull your data together for your funding sources. These include:

- Domestic Violence and Sexual Assault Agencies
- DA-Based Victim/Witness Programs
- Probation & Parole Departments
- Police Departments

TACT

Medical, Advocacy, and Law Enforcement organizations throughout the country are utilizing this unique case management tool to track SA/DV cases. Information about TACT:
